

Analysis Of Developed Countries In Attracting Active Investments

Aktamov Bobirjon - Senior lecturer, Tashkent State University of Economics. Department of "Evaluation work and investments". Uzbekistan, Tashkent city.

Annotation. This article examines the essence of the attractiveness of the investment climate, the theory of international indices recognized by the world, which assesses the investment potential, the views of economists on increasing investment attractiveness in attracting foreign investment. At the same time, the methods of determining the investment flow of developed countries, the negative and positive factors affecting investment attractiveness are analyzed. In addition, the necessary mechanisms for attracting foreign investment and scientific conclusions and recommendations to increase investment attractiveness have been developed.

Keywords: investment attractiveness, investment potential, investment policy, investment climate, foreign investment, investment potential, recipient, donor, investment attraction mechanism, investment flow.

1. Introduction.

The analysis of the socio-economic changes taking place in our country shows that the modernization of the economy and the role of active investment policy are very important in the achievements and success. Accordingly, it is important to create an effective system for managing the socio-economic development of the regions of the republic, to study the theoretical and methodological basis for assessing the attractiveness and potential of their investment climate. In this regard, the Action Strategy for the five priority areas of development of the Republic of Uzbekistan for 2017-2021 was approved by Presidential Decree on February 7, 2017. According to him, the third priority is the further development and liberalization of the economy, which aims to actively attract foreign investment in the sectors and regions of the economy by improving the investment climate [1].

In our view, although there are a variety of factors that can affect investment attractiveness, there are currently three major segments in Uzbekistan: social, economic and political today's globalization and technological armament, the role of investment flows as a combination of economic development is becoming increasingly important.

2. Literature review.

Considering the factors influencing the formation of a favorable investment climate in the country/region, it should be noted that the integration of the state into the world community in terms of investment attractiveness is crucial. The strategy of raising the country's investment profile is important for attracting foreign direct investment [2]. Interpretation of "investment potential" as a set of investment resources, consisting of part of the accumulated capital, expressed in the form of investment demand in the investment market, which has the potential to become a real investment demand that meets the material, financial and intellectual needs of capital reproduction reaches [3].

The attractiveness of the investment climate, the economic development of each region depends on the potential of capital, labor resources and the level of their use. It is generally accepted that the economic potential of a region and its potential is determined by the production of vital goods through the efficient use of all the complex resources available there [4].

If the tendency of accumulation within the country is greater than investment, then the exports in this country will exceed the volume of imports. Otherwise, the country's exports will be less than its imports. The country, which consumes more than it can afford, seeks to outsource its imports by attracting foreign investment. In this case, the attracted investments take the form of loans [6].

Defining a normative ratio between dividends and reinvestment in a country's dividend policy, protecting the rights of minority shareholders, increasing stock market prices, and expanding business

activities can increase a company's investment attractiveness, which has a positive effect on the country's investment attractiveness [5].

3. Research methodology.

Economic research methods such as data collection, analysis, synthesis, and logical thinking have been widely used to enhance the country's investment attractiveness.

4. Analysis and discussion of results.

The investment attractiveness of countries depends on a number of factors, including political, economic, social, cultural, organizational, legal and geographical. Based on these factors, investors decide whether or not to invest in the country. The World Bank's Doing Business report published annually by more than 6,700 experts from around the world, ranks 189 countries in terms of doing business (a total of 10 indicators) [6].

Naturally, not all of the indicators in this ranking are perfect. They exclude the following important factors: macroeconomic policy, quality of infrastructure, skills of the workforce, exchange rate fluctuations, investor opinion, the risk of corruption and its level [7].

The World Bank's ranking includes government-created administrative procedures for starting and running a business, as well as key factors related to the country's economic potential (market size, labor costs and ect.), as well as the risks that a potential investor may encounter [8].

Table 1

Ratings that reflect the investment climate and the attractiveness of countries for investors [9]

<i>Rating</i>	<i>Rating organizations</i>	<i>Evaluated parameters</i>	<i>Source of information</i>
Doing business	World Bank	Legal environment for doing business	Statistical and legal information, expert surveys
Global competitiveness index	World Economic Forum	Socio-economic parameters of countries	Statistics and surveys of company executives
Country Inactivity Index	Peace Fund	Existing risks for companies operating in the country	An internal system for collecting and analyzing information

Investment environment is widely used concept that covers all the issues that an investor should consider. The investor evaluates the advantages and disadvantages of investing in a particular country, as well as the ideology, policy, economy and culture of the country in which he intends to invest his capital [10].

Studies show that if the investment climate is good, on the one hand, it will increase domestic investment, and on the other hand, it will increase savings in relation to consumption as part of the planned expenditures. This is a guarantee of high economic growth [11].

In the course of research on the regional economy, the study grouped the factors that indicate the investment attractiveness of the regions into a single system. It summarizes and classifies scientific-practical views that represent the socio-economic potential of the region, reflecting the complex indicators of the quality of the main groups (Table 2) [12].

Table 2

The investment potential of the country and a set of factors influencing it [13]

№	Group	A set of indicators
I. FACTORS AFFECTING THE LEVEL OF INVESTMENT POWER OF REGIONS		
1	Natural-geographical potential	- raw material resources: mineral raw materials; land and water; fuel and energy; various ores and metals.
2	Work potential	- demographic potential of the region: population density; quantity and quality of labor resources; labor force; average monthly salary; number of unemployed; age level of employed and unemployed; skills and level of the unemployed.
3	Production potential	- production capacity: gross regional product (GRP); condition of fixed assets; productivity of factors of production; specialization of the region by industries and sectors; volume of imports and exports.
4	Innovative potential	- scientific and technical potential of the region: scientific and technical achievements; those with academic and research degrees; volume of scientific and technical projects; those engaged in science; existing research and development institutes/branches in the region.

The positive concentration of the various factors mentioned above allows for the active opportunities for economic growth. In addition, the most important thing is that foreign investors not only bring capital, but also bring advanced knowledge and experience from their home countries. This will allow the country to grow in the future [14].

5. Conclusions and suggestions.

Summarizing the above analysis and considerations, it should be noted that in the context of intensifying modernization processes, the state's medium and long-term investment strategy should focus on the following tasks:

1. Consistent implementation of structural changes aimed at ensuring high competitiveness of the national economy;
2. Develop models for the efficient use and optimal proportion of economic resources based on the law of efficient and limited reduction of capital resources in the increase of regional wealth and implement;
3. Develop comprehensive programs to ensure the sustainable development of the regions and their smooth and uninterrupted development;
4. Support for priority sectors that serve to increase the import and export potential of the economy, as well as create high added value;
5. Support for priority investment projects aimed at the development of regional infrastructure.
